DETECT & MONITOR AQUATIC SPECIES

With EQO environmental RNA Biotechnology

EQO Dx - OSS Osprey Survey System

With **breakthrough eRNA scientific advances**
delivering the highest accuracy, predictive
results and actionable information!

EQO Dx - OSS is the first innovative capture
system enabling early detection and
monitoring of target aquatic organisms.

Now You Can Detect
and Monitor **LIVE**
aquatic organisms
using EQO
environmental RNA
technologies!

Prevent

The spread of AIS and identify aquatic organism with early identification and monitoring.

Detect

Genetic signals at the single molecule level to prevent, control or detect species.

Monitor

To track live populations in your waterway with EQO Dx OSS innovative capture system.

ABOUT

EQO Dx proprietary preservation solution captures signals of genetic materials that normally degrade quickly in the environment. EQO scientists then perform sophisticated analyses to identify expressed genes of live organisms of interest (differentiating from traces of dead organisms).

EASY PROCESS

- ✓ Order EQO Osprey by contacting info@eqo.life
- ✓ Receive the OSS System with Easy instructions
- ✓ Return equipment with used sample cartridges & all components using provided shipping label
- ✓ EQO scientists extract, preserve, catalogue, and analyze genetic information
- ✓ EQO sends a Diagnostics Report with actionable information

EQO – Protecting and Restoring Bio-Integrity in Aquatic Environments Together!
